IN THE CLAIMS

1. (previously presented) A check comprising:
sheet material having a first area portion and a second area portion which is different from the first area portion;
means defining at least one symbol which is pre-printed on the first area portion of the sheet material; and
means for storing on the second area portion of the sheet material encoded information including apriori reference image quality data which is representative of at least one image quality characteristic associated with the at least one symbol which is pre-printed on the first area portion of the sheet material.
2. (previously presented) A check comprising:
sheet material having a first area portion and a second area portion which is different from the first area portion;
at least one symbol which is other than a magnetic ink character recognition (MICR) codeline and which is pre-printed on the first area portion of the sheet material; and
means for storing on the second area portion of the sheet material encoded information including apriori reference image quality data which is representative of at least one image quality characteristic associated with the at least one symbol which is other than a MICR codeline and which is pre-printed on the first area portion of the sheet material.
- 3-10. (canceled)
11. (previously presented) A method of providing an indication of quality of an image of a financial document having a first area portion and a second area portion which is different from the first area portion, the method comprising:

10/691,215

storing on the second area portion of the financial document encoded information including apriori reference image quality data which is representative of an image quality characteristic associated with at least one symbol which is pre-printed on the first area portion of the financial document;

receiving image data which is representative of the image of the financial document;

retrieving the apriori reference image quality data from the encoded information stored on the second area portion of the financial document;

comparing the retrieved apriori reference image quality data with the received image data to determine the image quality of the symbol which is pre-printed on the first area portion of the financial document; and

providing an indication of quality of the image of the financial document based upon the comparison of the retrieved apriori reference image quality data with the received image data.

12-13. (canceled)

14. (previously presented) A method of providing an indication of quality of an image of a check having a first area portion and a second area portion which is different from the first area portion, the method comprising:

storing on the second area portion of the check encoded information including apriori reference image quality data which is representative of an image quality characteristic associated with a symbol which is other than a magnetic ink character recognition (MICR) codeline and which is pre-printed on the first area portion of the check;

receiving image data which is representative of the image of the check;

retrieving the apriori reference image quality data from the encoded information stored on the second area portion of the financial document;

10/691,215

comparing the retrieved apriori reference image quality data with the received image data to determine the image quality of the symbol which is other than a MICR codeline and which is pre-printed on the first area portion of the check; and

providing an indication of quality of the image of the check based upon the comparison of the retrieved apriori reference image quality data with the received image data.
